

DURATHON™ Elite MAINTENANCE Guidelines (indoor)

CLEANING PROCEDURE

1. Sweep/vacuum floor.
2. Mix cleaner* with water using manufacturer's recommended water-to-cleaner ratio.
3. Apply cleaner/water* solution to floor. Allow solution to stand on floor to emulsify, but do not allow cleaner to dry. Scrub with a natural fiber brush or red scrub pad, then remove solution with wet/dry vacuum. Continue cleaning sections of the floor until entire floor has been cleaned.
4. Place "wet floor" signs. Allow floor to dry overnight.

SCHEDULE

1. IT IS IMPORTANT to routinely remove dirt and grit. If allowed to build-up, dirt, grit and grime will make long-term maintenance more difficult.
2. SPOT CLEAN AS NEEDED. Remove water with a wet-dry vacuum. Frequency of spot cleaning will depend on the amount of use, type of use, and the quality of daily maintenance.
3. WASH WITH AUTOSCRUBBER AND CLEANER ON A REGULAR BASIS. Depending on frequency of use, surface may require weekly scrubbing. Surface should be cleaned minimally on a monthly basis.
4. FOR BADLY WORN OR DAMAGED FLOORS, consult Robbins or your authorized Robbins installer to determine if deep scrubbing, stripping or replacement is necessary.

SPOT REMOVAL

Remove difficult stains and/or scuff marks with a NON-ABRASIVE CLEANER. Stronger cleaning agents (e.g., citrus-based cleaner) can be used for tar removal. Floor must be rinsed with water following use of any cleaner. FAILURE TO REMOVE CLEANER COULD RESULT IN PERMANENT DISCOLORATION OF FLOOR. Before using any cleaner, test a small area (in corner, behind bleachers) to determine best results.

IMPORTANT! Keep dust and grit off floor. (Use floor mats at entrances to gym and high-traffic areas).

AVOID use of low-quality footwear (especially black-soled shoes) that can cause excessive scuffing. Tables, chairs and movable equipment should have proper functioning "glides" to minimize indentations.

Avoid phosphates, solvents and all moderate-to-high-sudsing products.
